COMPANY PROFILE

- 회사명 : 베스텍주식회사
 - 대표자 : 하강수
 - 설립일 : 1989. 01. 01
 - 업종 : 제조업
 - 생산품 : 오일 로타리 진공펌프, 드라이 진공펌프, 메카니컬 부스터펌프
오일학산펌프, 냉매차징머신, 가스회수장치, 고진공포장기 외
 - 주소 : 경기도 안산시 단원구 번영로 32번길 14 (우)425-110 (시화공단 4바 602호)
 - 연락처 : TEL. 031-498-7300 FAX. 031-319-5423
 - Website : www bst co kr
 - E-mail : bst@bst.co.kr
 - 거래처 : 삼성전자, 엘지전자, 현대자동차, 기아자동차, 대우조선해양 외

- Company Name : Bestech Co.,Ltd.
 - President & C.E.O : Gang Su Ha
 - Establishment : 1989. 01. 01
 - Type of Business : Manufacture
 - Product line : Oil Rotary Vacuum Pump, Dry Vacuum Pump, Mechanical Booster Pump, Diffusion Pump, Refrigerant Charging Machine, Gas Recovery System, High Vacuum Sealing Machine and other Vacuum Equipment
 - Address : 14, Beonyeong-ro 32beon-gil, Danwon-gu, Ansan-si, Gyeonggi-do, Korea
425-110 (4Ba 602Ho Shihwa industrial complex)
 - Contact : Tel. +82-31-498-7300 Fax. +82-31-319-5423

VACUUM TECHNOLOGY
BESTECH CO., LTD.
www.bst.co.kr bst@bst.co.kr
베스텍(주)

1989.01	진공사업 시작(서울 시흥동)	1989.01	Started vacuum business (Shiheung-dong in Seoul)
1993.04	핸드캐리 로터리펌프 개발(140 l /min)	1993.04	Developed Transportable handy pump(140l/min)
1995.01	양천구 공장 이전	1995.01	Yangcheongu factory relocation
1996.06	BT시리즈 로터리펌프 개발(100~1,500 l /min)	1996.06	Developed BT Pump (100-1500l/min)
1997.01	법인전환	1997.01	Incorporation
1998.04	독산동 본사 이전	1998.04	relocate officehead office(Doksan-dong)
2000.01	B(M)시리즈 메카니컬부스터펌프 개발(120m ³ /hr)	2000.01	Developed BM Pump Series Mechanical Booster Pump (120m ³ /h)
2001.05	B(M)시리즈 메카니컬부스터펌프 개발 (300/600/1,200/2,400/3,600m ³ /hr)	2001.05	Developed BM Pump Series Mechanical Booster Pump (300-3,600m ³ /h)
2001.07	핵심부품 국산화 업체 선정(산업자원부)	2001.07	Selected as the core parts localizing company(from The department of industrial resources vice-minister)
2001.08	본사 및 시회공장 준공, 이전	2001.08	Finished constructing Head office and Factory at Shihwa industrial complex(with the same factory as present location)
2002.05	VP시리즈 로터리펌프 개발(3,000/5,500/8,000 l /min)	2002.05	Developed VP Oil Rotary Vacuum Pump(3,000/5,500/8,000l/min)
2002.07	ISO9001 인증 획득	2002.07	Achieved ISO9001 certificate
2003.05	유망 중소기업 및 수출 유망 중소기업 선정(중소기업청)	2003.05	Selected as "the Promising small and medium-sized company as well as promising export Enterprise"
2003.09	한국 반도체 장비 경연대회 산업지원부 장관상 수상 (산업자원부)	2003.09	(from Small and Medium Business Administration)
2005.07	클린환경사업장 지정(노동부)	2003.09	Won "the Korean semiconductor equipment contest" (from the department of industrial resources vice- minister)
2005.12	CE 인증 획득	2005.07	Selected as Clean Workplace (from the Ministry of Labor in Korea)
2007.06	SD시리즈 스크류드라이펌프 개발(120/300/480/660m ³ /hr)	2005.12	Achieved C.E certification
2009.08	SES시리즈 드라이펌프 시스템 개발 (120/300/330/500/600/700/1,200m ³ /hr)	2007.06	Developed SD Pump Series Dry Pump (120/300/480/660m ³ /hr)
2010.01	기업부설연구소 설립인가(한국사업기술진흥협회)	2009.08	Developed SES Pump Series Ace Pump System (120/300/330/500/600/700/1,200m ³ /hr)
2010.11	안산 제2공장 매입(대지3,504m ² , 건물3,294m ²)	2010.01	Research institute establishment (Korea Industrial Technology Association)
2010.12	이노비즈기업 선정(중소기업청)	2010.11	Purchase The Two Plant in Ansan (Floor area 3,504m ² , Building Area 3,294m ²)
2010.12	벤처기업 선정(기술보증기금)	2010.12	Innobiz Determine(Small and Medium Business Administration)
2012.01	B(I)시리즈 대형 메카니컬부스터펌프 개발(7,000m ³ /hr)	2010.12	Venture Business Determine(Technology Guarantee Fund)
2013.06	MS시리즈 대형 로터리펌프 개발 (12,000/16,000/20,000 l /min)	2012.01	Developed Large Mechanical Booster Pump(7,000m ³ /h)
2013.07	안산 제3공장 매입(대지8,281.2m ² , 건물5,931.5m ²)	2013.06	Large Directly 2Stage Type MS Pump Rotary Pump
2013.08	안산 제2공장 무인 자동 가공설비 & 생산 가공설비 증설완료	2013.07	Three Type Developed (12,000/16,000/20,000l/min)
2014.02	안산 제3공장 가동	2013.08	Purchase The Three Plant in Ansan (Floor area 8,281.2m ² , Building Area 5,931.5m ²)
2014.03	B(I)시리즈 대형 메카니컬부스터펌프 개발(5,500m ³ /hr)	2014.02	The Two Plant in Ansan Unattended automatic processing equipment +Production and processing capacity expansion
2015.02	MS시리즈 소형 로터리펌프 개발(420/650 l /min)	2014.02	The Three Plant in Ansan Operation (Floor area 8,281.2m ² , Building Area 5,931.5m ²)
2016.01	MS시리즈 소형 로터리펌프 개발(1,000/1,600/2,200 l /min)	2014.03	Developed Large Mechanical Booster Pump (5,500m ³ /h)
2016.05	MS시리즈 중형 로터리펌프 개발(3,500/6,000/8,000l/min)	2015.02	Developed MS PUMP Small Rotary Pump (420/650l/min)
2016.06	안산 제 3공장 양산용 자동화 가공설비 증설완료	2016.01	Developed MS PUMP Small Rotary Pump (1,000/1,600/2,200l/min)
		2016.05	Developed MS PUMP Medium Rotary Pump (3,500/6,000/8,000l/min)
		2016.06	The Three Plant in Ansan Unattended automatic processing equipment+Production and processing capacity expansion

GREETINGS

안녕하십니까?

베스텍은 진공펌프를 개발하고 설계하며 제조 생산하고 있는 대한민국의 가장 대표적인 진공 전문기업입니다.

당사는 경영이념 중 하나인 “**고객 만족의 극대화**”를 모토로 고객의 입장을 고려한 제품의 개발을 하고자, 설계단계부터 적극적인 의견 반영을 하고 있습니다. 끊임없는 노력으로 제품의 품질을 더욱 고급화하며 내구성을 향상시키고, 보다 양질의 진공펌프를 만들기 위하여 언제나 제품개발에 전력투구를 하여 신제품을 계속해서 시장에 소개하고 있습니다.

또한, 고객으로부터 받는 각광은 제품에 긴 생명력을 불어넣을 수 있다는 생각을 가지고 오늘도 변함없이 신제품 개발에 임하고 있습니다. “**그칠 줄 모르는 신제품 개발**”을 모토로 한 베스텍의 기술은 고객 분들께 더 많은 선택을 받고 있습니다.

현재는 기술 개발뿐만 아니라 다양한 판매망을 구축하여 고객에게 더욱 가까이 다가갈 수 있도록 노력을 하고 있습니다.

베스텍 제품을 선택하시는 모든 분들께 더욱 고급화된 기술과 편리한 서비스를 제공하겠습니다.

아울러 당사의 제품을 애용해 주시는 고객 여러분께 진심으로 감사를 드립니다.

President & C.E.O. 하 강 수

Dear Customer,

BESTECH Co., Ltd. is the representative and leading company specializing in vacuum industrial fields, which has been developing, designing, manufacturing, producing vacuum industrial product in Korea.

We have been devoting ourselves to developing products, which raises customers' value under the company motto, “**Maximize customer satisfaction**” since planning step of product development and also, we have always paid attention to customers' opinion. BESTECH's belief currently makes fruitfulness through producing high-class product, innovatively improving duration, and developing and manufacturing the best quality vacuum pump.

Also, through our passion on the technology, “**Endlessly develop new products!**”, we have endowed each part and product with dynamical vitality and our products have been recognized, selected, and loved as the most advanced and the best products by customers in related markets as well.

The company recognized by customers! The company receiving love from customers!

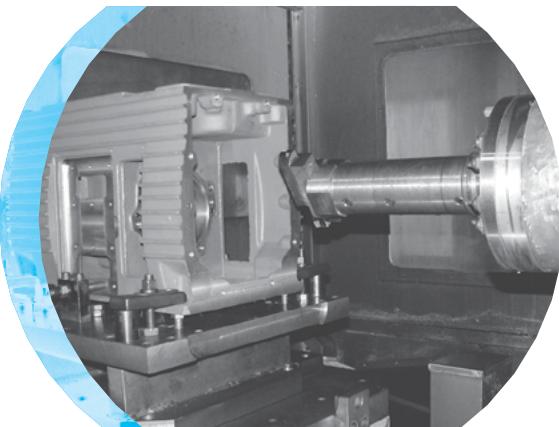

We sincerely thank you, customers for loving and kindly using our products will all our hearts and also, we, the whole personnel will recompense your encouragement for the best technology, the most advanced product, and convenient service.

Thank you.

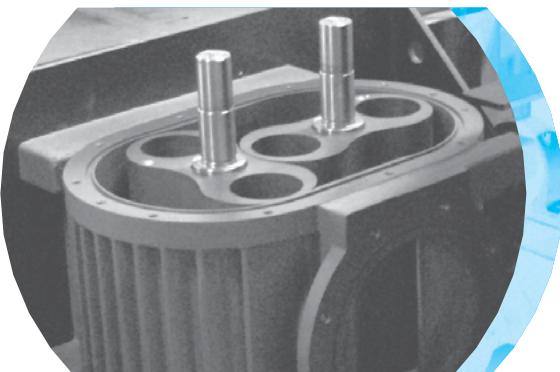

President & C.E.O. Gang Su Ha

SMALL ROTARY VANE PUMP

소형 펌프의 특징 & 장점 Advantage for vacuum pump

(MS6A, MS12A, MS25A, MS40A, MS60A, MS100A, MS135A)

• 오일역류 방지 밸브 장착

펌프가 작동중에 예상치 못한 정전이나 모터 고장으로 갑자기 멈추었다가 재가동시 펌프내의 오염으로 부터 진공설비를 완벽하게 보호하여 내구성을 좋게 하였다.

• Oil Backflow prevention valve

When the pump is suddenly stopped by a power failure or motor failure not unexpected during operation And restart From contamination inside the pump to fully protect the vacuum system has good durability.

• ISO 규격의 Motor Flange 적용

ISO 플랜지의 규격 모터를 사용하여 어느 곳에서나 그리고 누구나 모터 교체가 용이하도록 하였다.

• ISO standards application(Motor Flange)

According to using ISO standards motor application, anyone can shift and change the motor easily at anyplace and anytime.

• ISO 규격의 흡입구 배기구 적용

ISO 국제 규격에 맞는 "Quick Clamp"를 사용하여 짧은 시간내에 진공설비와 펌프를 쉽게 장착 및 분리 할수있도록 하였다.

• ISO standards application(Intake and Exhaust Ports)

These pump us the standard ISO KF(quick clamp)fitting on both intake and exhaust ports th allow for quick connection and disconnection to vacuum system.

• MS Series는 소음이 매우적다.

이상적인 구조를 기반으로 설계하여 가동시에 발생되는 소음을 감소하였다.

• MS Series, Small noise

Ideally designed, we realized very small noise

• 최급이 간편하고 커플링측 점검이 용이하다.

펌프측면에 커버를 설치하여 누구나 쉽게 커플링 측을 점검할수 있도록 하였다.

• Handling is simple and easy to check coupling side.

Install the cover on the pump side were anyone can easily check the coupling side.

• 오일 씰 교환이 용이하다.

축(Shaft) 누유(leakage)에 대한 신뢰도가 높으며 점검이 용이하다.

• The replacement about oil seal is easy.

The trust of the shaft leakage is high, it is easy to check.

VACUUM PUMP

MS SERIES

SMALL ROTARY VANE PUMP

■ 소형 구조 & 작동원리 Structure and operation principle ■

MS 시리즈는 직결형 오일로터리 진공펌프이다.

펌프 구조는 아래 단면도에서 보는 바와 같이 펌프실린더 그리고 펌프보호를 위한 역류방지 밸브가 있으며 펌프 하우징과 실린더안에서 편심되어 있는 로터, 베인, 배기 밸브 등 그외 다수 구성품으로 구성되어 있다.

MS 시리즈 진공펌프의 작동원리는 실린더와 편심되어 있는 로터가 회전하면 흡입과 배기가 순차적으로 진행하도록 하는 원리이다.

모터의 회전 동력은 플렉시블 커플링에 의해 펌프로 전달되어 모터가 회전함에 따라 펌프도 회전한다.

로터가 회전하면 로터의 홈 안에 있는 두개의 베인이 원심력과 오일압력에 의해 실린더 내면에 슬라이딩하며 회전한다.

흡입구를 통과하여 흡입된 가스는 펌프 실린더 내로 유입된다.

회전 운동을 하고 있는 베인은 흡입구 관로를 지나가면 가스는

두개의 베인 사이에 갇혀서 배기구에 있는 배기밸브 방향으로 회전되어 진다.

앞쪽의 베인이 배기구멍을 지나면서 가스는 압축되기 시작하여 충분히 압축된 가스는 배기 밸브를 열고 배기구를 통하여 배기되며 실린더의 내면과 베인, 로터의 베인홀과 베인, 기타운동되는 부위에 윤활과 기밀유지를 위해 오일을 공급해준다.

MS Series pump is oil rotary vacuum pump.

This structure of MS oil rotary vacuum pump series consist of pump body, Backflow prevention valve for pump protection,

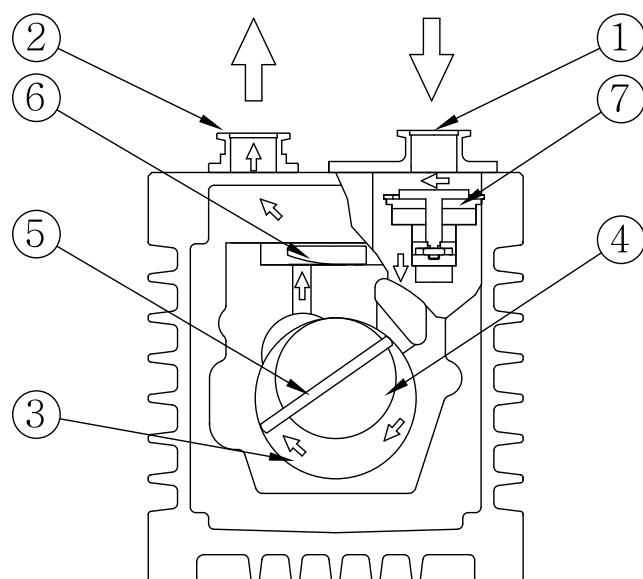

including pump housing, rotor being eccentric in cylinder motor oil case, vane, Exhaust valve and parts related to it Structure and operation principle of MS series vacuum pump operating is rotation type.

At this time, the rotor has the eccentricity and the cylinder at the pump so that makes suction and exhaustion in order.

As the rotor rotates, two vanes mounted at rotor slides and turns at internal cylinder by centrifugal force and oil pressure.

The gas filtered through the dirt trap. At suction port flows into the pump cylinder.

As vanes rotating and slide near the intake aperture, the gas is confined between two vanes, then the gas turns and moves to exhaust valve. Passing exhaust valve is discharged through the exhaust port.

5. VANE
6. EXHAUST VALVE
7. BACKFLOW PREVENTION VALVE

VACUUM PUMP

MS SERIES

MEDIUM ROTARY VANE PUMP

■ 중형 펌프의 특징 & 장점 Advantage for vacuum pump ■

(MS220AS, MS220AD, MS370AS, MS370AD, MS500AS, MS500AD)

• 안정된 냉각 효과

1차 실린더와 오일 케이싱 사이에 냉각수가 흐르고 있어 냉각 효과가 매우 뛰어나다.
(저 진공에서 연속운전이 가능하다.)

• The stable cooling effect

Because the cooling water is flowing between the first cylinder and the oil casing and the cooling effect is superior. (Continuous running is possible at low vacuum)

• 안정된 진공도

오일펌프는 진공압력의 높고 낮음에 따라 실린더 내부에 적정량의 오일을 공급함으로써
가동 시간 대비 진공도 변화량이 매우 작다.

• Stable vacuum pressure

The oil pump supplies proper amount of oil inside the cylinder according to vacuum pressure degree, which causes very small amount of changing vacuum pressure compared to operation hour.

• 진동이 매우 적다.

편심을 최소화하는 기하학적 설계를 적용한 직결구동을 실현함으로써 동일 배기량의
피스톤 형식에 비해 진동이 매우 적다.

• The small vibration

By realizing directly connected driving that the geometric design is applied to minimize the eccentric rotation, it shows very small vibration in compared to piston type having the same displacement.

• 경량화, 소형화된 진공펌프

실린더와 케이싱을 일체화하여 설치면적을 최소화한 독창적인 형식이다.

• Weight reduction, and a miniaturized vacuum pump

Integration of the cylinder and the casingMinimize the installation area of the original format.

MEDIUM ROTARY VANE PUMP

■ 중형 펌프의 특징 & 장점 Advantage for vacuum pump ■

(MS220AS, MS220AD, MS370AS, MS370AD, MS500AS, MS500AD)

- 소음이 매우 작다.

배기밸브에 위치하고 있는 밸브캣처의 형상을 이상적으로 설계하여 소음이 매우 작다.
1단형 펌프에서는 소음 조절이 가능한 사일런스 슬로우 밴트 밸브가 있다.

- Small noise

By ideally designing the valve catcher situated at the exhaust valve, we realized very small noise.

- 오일여과용 필터와 오일 압력계가 장착되어 있다.

오일필터에 의해 이물질을 거른 오일을 펌프 내부로 공급하며, 필터압력계를 보면 필터의 교환 시점을 알 수 있다.

- Oil pressure gauge and oil filter are equipped.

Filtered oil without strange material is supplied inside the oil pump and also, you can know when the filter will be changed through the filter pressure guage.

- 호환성이 높다.

1단형 펌프와 2단형 펌프는 호환이 가능하도록 제작되었다.

- Excellent compatibility

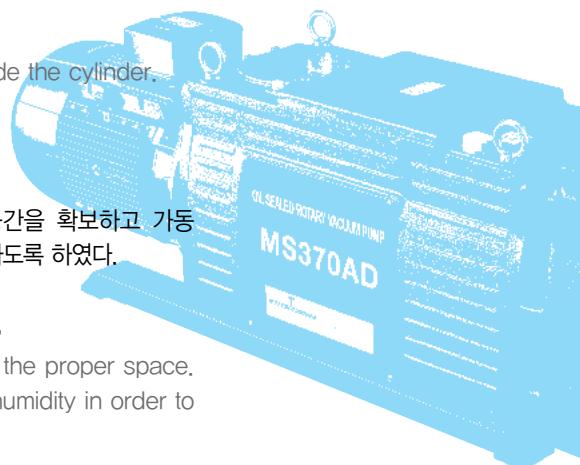

It is manufactured in order that the one-stage pump and the two-stage pump are mutually compatible.

- 오일 공급량을 자동 제어한다.

실린더 내의 진공 압력에 따른 오일 공급량을 적절하게 제어해 준다.

- Automatic control oil supply volume

It properly control oil supply according to pressure inside the cylinder.

- 유수분리가 용이하도록 설계되었다.

케이싱과 연결되어 있는 익스텐션 커버의 내부는 적절한 공간을 확보하고 가동 중에도 오일의 흐름을 최소화하여 오일과 수분의 분리가 용이하도록 하였다.

- This pump is designed for easy maintenance.

Inside extension connected with casing cover ensures the proper space. Also, it is designed in order to easily separate oil and humidity in order to minimize oil flow even during operation.

MEDIUM ROTARY VANE PUMP

■ 중형 펌프의 특징 & 장점 Advantage for vacuum pump ■

(MS220AS, MS220AD, MS370AS, MS370AD, MS500AS, MS500AD)

- **취급이 간편하고 분해 점검이 용이하다.**

케이싱 내부의 세정을 용이하도록 펌프측면과 상단에 다수의 커버를 설치하여 누구나 쉽게 분해, 세정할 수 있도록 하였다.

- **Simple treatment and easy overhaul**

The casing has several side covers at pump's side and top for easy cleanup, which has everyone easily disassemble and clean up it.

- **ISO 규격의 Motor Flange 적용**

ISO 플랜지의 규격모터를 사용함으로써 어느 곳에서나 그리고 누구나 모터 교체가 용이하도록 하였다.

- **ISO standards application**

According to using ISO standards motor application, anyone can shift and change the motor easily at anyplace and anytime.

- **오일 미스트 트랩의 장착이 용이함 – 선택사양**

오일 미스트 트랩을 장착하면 오일의 소모량이 적고 유연발생과 소음을 줄일 수 있도록 하였다.

- **Oil Mist Trap are possible to take easily—Option**

Oil Mist Trap is designed for less oil smoke, noise and oil consumption.

- **가스 밸라스트 밸브의 장착이 가능함 – 선택사양**

수분의 응축을 줄이기 위해 가스 밸라스트 밸브를 장착할 수 있다.

- **Gas ballast valve are possible to be easily installed—Option.**

It can take an adoption gas ballast valve in order to reduce condensation of moisture.

- **오일순환 안전장치가 장착되어 있음**

오일필터가 막히면 오일안전 장치가 자동으로 작동되어 거르지 않은 오일을 윤활부에 즉시 공급한다.

- **Affixed the oil circulation safety device**

When the oil filter is blocked, automatically, the oil circulation safety device immediately supplies the oil which is not filtered to the lubricating parts.

LARGE ROTARY VANE PUMPS

■ 대형 펌프의 특징 & 장점 Advantage for vacuum large pump ■

(MS720AS, MS720AD, MS960AS, MS960AD, MS1200AS, MS1200AD)

- 업계최대용량

고진공 펌프로서 업계최대용량의 직결구동형식이다.

- The industry's highest capacity

High vacuum pump. Is the industry's highest-capacity direct-coupled system.

- 냉각수 열교환량 극대화

1차 실린더 워터자켓 접촉면적이 최대화되도록 구성하여 동일한 냉각수량으로 2배 이상의 방열효과를 구현한다.

- maximization of cooling water heat exchanger

The primary cylinder water jacket is configured to maximize the contact area With the same amount of cooling water at least twice the heat radiation effect implements.

- 역류방지밸브 적용

대용량 펌프 최초로 역류방지밸브를 적용하여 프로세스 오염을 방지할 수 있다.

- Apply backflow valve

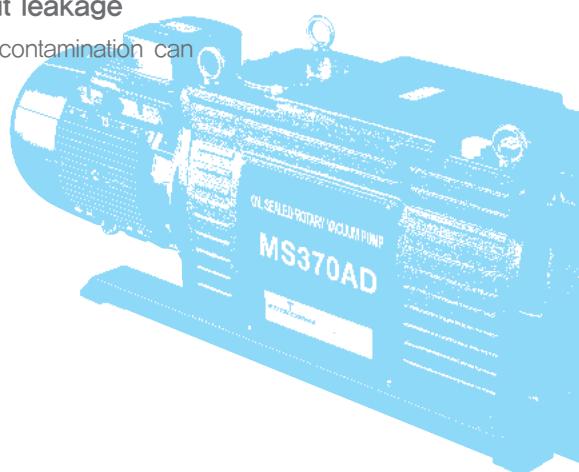

Mass pump having first non-return valve was applied. So the process can be prevented from being contaminated.

- 누유없는 청정환경 구현

축 인출부 누유현상이 방지되는 구조로써 오염 없이 유지관리가 가능하다.

- Implementation of a clean environment without leakage

The structure of the front axle is prevented leakage, contamination can be managed without.

LARGE ROTARY VANE PUMPS

■ 대형 펌프의 특징 & 장점 Advantage for vacuum large pump ■

(MS720AS, MS720AD, MS960AS, MS960AD, MS1200AS, MS1200AD)

• 강성에 따른 내구성향상

회전자, 축, 오일펌프 등의 구조 및 재질의 강성을 향상시켜 내구성을 강화시켰다.

• Improve the durability of stiffness

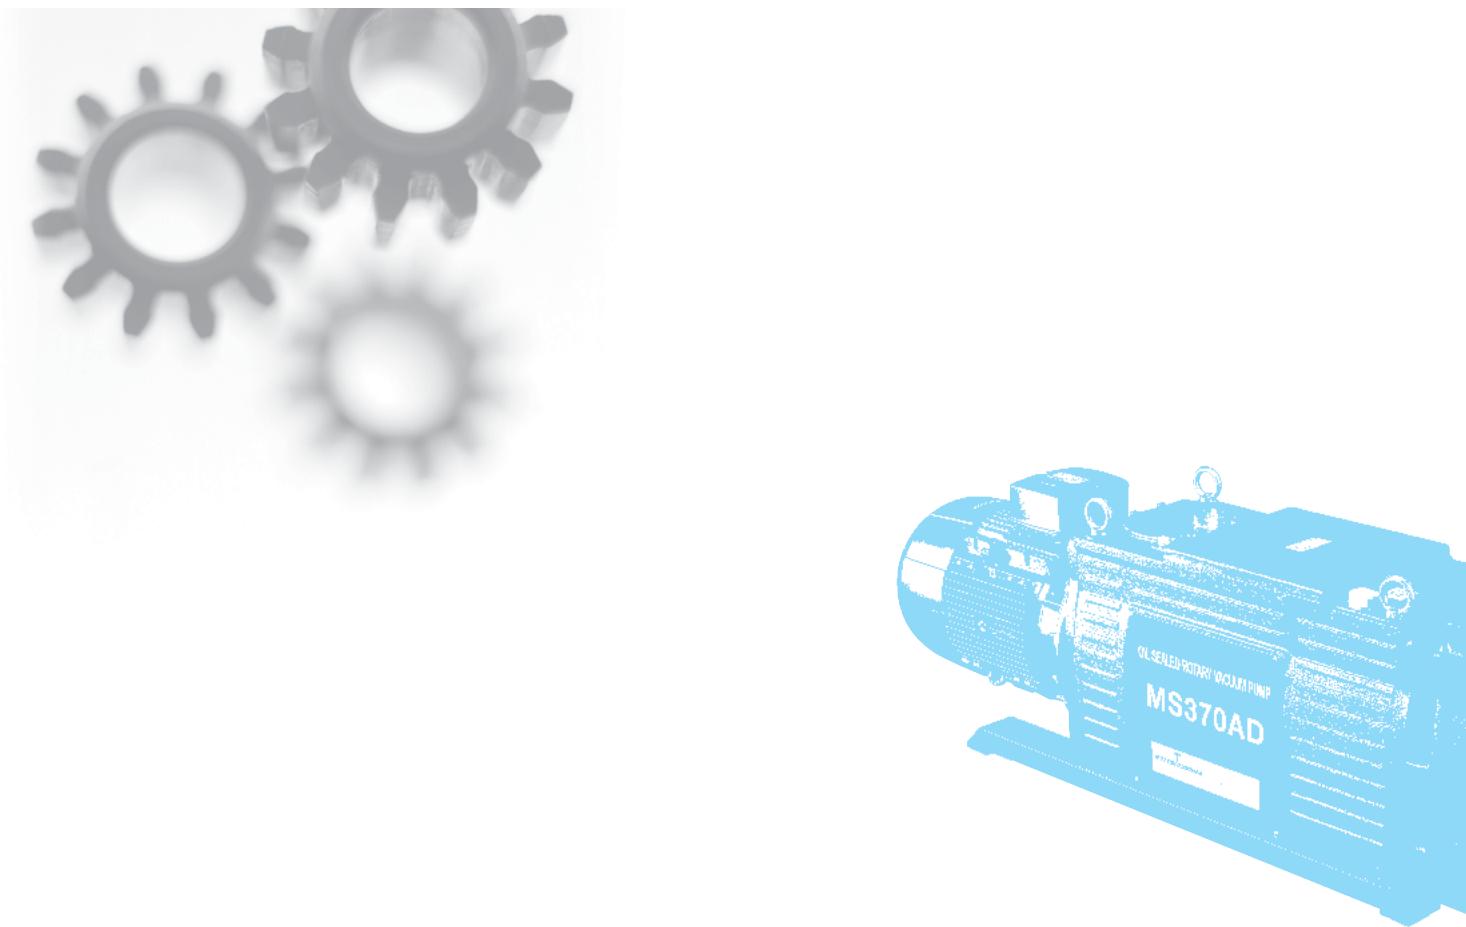

Rotor, shaft, oil pump, etc. enhance the rigidity of the material Reinforced durability.

• 첨단기술로써 대형부품 구성

주요 부품의 최적화된 설계 및 제작기술로 마찰열 등 고진공 직결구동형식이 구현되지 못했던 문제점을 해결하여 이상적인 메커니즘을 취한다.

• Improve the durability of rigidity

Part of an optimized design and the production technology Other types of frictional heat in the implementation of direct drive high vacuum did solve the problem. An ideal intoxication mechanism.

MEDIUM, LARGE ROTARY VANE PUMP

■ 중형, 대형 구조 & 작동원리 Structure and operation principle ■

MS 시리즈는 직결형 오일로터리 진공펌프이다.

사용범위는 실험실에서부터 산업용 진공 산업까지 광범위하게 사용할 수 있도록 설계되었다.

펌프 구조는 아래 단면도에서 보는 바와 같이 펌프실린더, 로터, 베인, 배기밸브와 각 부품으로 구성되어 있다.

MS 시리즈 진공펌프의 작동원리는 실린더와 편심되어 있는 로터가 회전하면 흡입과 배기가 순차적으로 진행하도록 하는 원리이다. 모터의 회전 동력은 플렉시블 커플링에 의해 펌프로 전달되어 모터가 회전함에 따라 펌프도 회전한다.

로터가 회전하면 로터의 홈 안에 있는 두개의 베인이 원심력과 오일압력에 의해 실린더 내면에 슬라이딩하며 회전한다.

흡입구 여과망을 통과하여 흡입된 가스는 펌프 실린더 내로 유입된다. 회전 운동을 하고 있는 베인은 흡입구 관로를 지나가며 가스는 두개의 베인 사이에 갇혀서 배기구에 있는 배기밸브 방향으로 회전되어 진다.

앞쪽의 베인이 배기관을 지나면서 가스는 압축되기 시작하여 충분히 압축된 가스는 배기밸브를 열고 배기라인을 통하여 배기된다. 실린더 내면과 베인, 로터의 베인홈과 베인, 베어링, 슬라이딩되는 모든 부위의 윤활과 기밀을 위해 오일을 실린더에 공급하여 준다.

MS Series pump is oil rotary vacuum pump.

This Pump is designed to be widely applied from laboratory to industrial vacuum facilities. This structure of MS oil rotary vacuum pump series consist of Pump cylinder, Rotor, Vane, Exhaust Valve and Other parts.

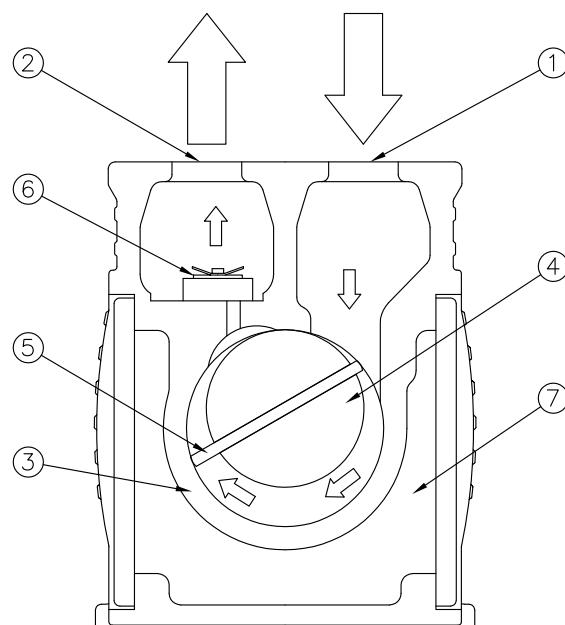

Structure and operation principle of MS series vacuum pump operating is rotation type. At this time, the rotor has the eccentricity and the cylinder at the pump so that makes suction and exhaustion in order.

As the rotor rotates, two vanes mounted at rotor slides and turns at internal cylinder by centrifugal force and oil pressure.

The gas filtered through the dirt trap filter at suction port flows into the pump cylinder.

As vanes rotating and slide near the intake aperture, the gas is confined between two vanes, then the gas turns and moves to exhaust valve. Passing exhaust valve is discharged through the exhaust port.

The vane is rotated by the exhaust hole that makes gas compressing sufficiently, the gas can open exhaust valve to exhaust through the exhausting line. Oil is supplied to vane, surface inside cylinder, vane to vane groove of rotor, bearing and all sliding parts for lubrication and airtight.

● BOOSTER PUMPS

■ 펌프의 특징 & 장점 Advantage for vacuum pump ■

• 안정된 성능

케이싱 내에는 윤활유가 없기 때문에 수증기, 용제 등의 증기에 대해서도 안정된 성능을 얻을 수 있다.

• Performance is very good.

To get the efficiency inside casing because it is not the lubricating oil is stabilized even about the fume of vapor and solvent etc.

• 내부식성이 우수하다.

가스 부위와 접하는 표면은 강성이 높고, 내부식성이 우수한 표면 처리를 하였다.

• The better resistant to abrasion

Inside contact surface is higher strength, It can take the special treatment at surface as the demand that those are very strong resistant to abrasion.

• 상호 호환성을 향상시켰다.

BM형과 B형은 대기압 기동방식과 비대기압 기동방식의 차이이며 간단히 커플링 교체만으로 동시에 사용이 가능하도록 하였다.

• The compatibility is good.

BM type and B type which are having difference that is atmospheric starting method or non-atmospheric starting. It can use for your order to change their coupling easily.

• ISO 규격의 모터 플랜지 적용

ISO 플랜지의 규격모터를 사용함으로써 어느 곳에서나 그리고 누구나 모터 교체가 용이하도록 하였다.

• ISO standards application.

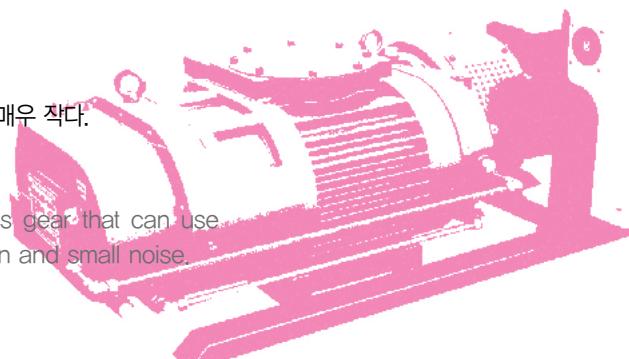

According to using ISO standards motor application, anyone can shift and change the motor easily at anyplace and anytime.

• 높은 정밀도와 강성기어를 사용하였다.

높은 강성기어를 사용함으로써 고속회전에도 소음과 진동이 매우 작다.

• Used high precision gear with high hardness

Used a high precision and the high grade hardness gear that can use with high-speed rotation, this gear has small vibration and small noise.

VACUUM PUMP

B(M) SERIES

BOOSTER PUMPS

펌프의 특징 & 장점 Advantage for vacuum pump

• Solid Disk 타입의 Mechanical Seal 적용(선택적 적용)

높은 강도의 Solid Disk를 적용한 Mechanical Seal은 내마모성과 내구성이 매우 높다.

• Solid disk type mechanical seal applications(selective application)

Mechanical seal where applies solid disk of the high grade hardness, wear is less and durability are very good.

• 양방향의 더블 립씰 적용(선택적 적용)

내구성이 좋은 양방향의 더블 립씰을 사용함으로써 누설양이 매우 적어 보다 안정적인 높은 압력을 얻을 수 있다.

• The double lip seal can use on both direction of pressure.(selective application)

The double lip seal on the both direction that has the durability is good and the leakage very small so it has stable and high vacuum pressure.

• 보다 안정적이며 회전 전달력이 빠른 마그넷커플링 적용

마그넷커플링을 모터 축에 일체화함으로써 고속 회전 시 높은 안정성을 유지하고, 펌프 측과 모터 측의 부하 편차 시 적절한 회전수를 유지하여 빠르게 모터의 회전량을 펌프 측에 전달하도록 한다.

• The better stability and fast connecting magnet coupling application

To make one body with magnet coupling and axis of motor that has stability when pump rotate with high speed. If Pump and motor have not rotate equally each other, that is, loaded deflection. Magnet coupling makes it's the rotating speed fast from motor.

• 흡입라인의 방향을 다양하게 하였다.

BM(B)12A와 BM(B)24A BI(B)36A는 흡입구 방향을 수평 형(H)과 수직 형(V)으로 사용이 가능하다.

• Direction of suction line variously

BM(B)12A, BM(B)24A, BI(B)36A can adopt the horizontal(H) or vertical(V) at inlet port suction's direction.

• 인버터를 적용한 배기량 제어 가능(선택적 적용)

BI12A, BI24A, BI36A는 인버터를 적용하여 배기량 제어가 가능하도록 하였다.

• The displacement control possible which applies the inverter(selective application)

BI12A, BI24A and BI36A applied the inverter optionally in order to control exhaustion.

VACUUM PUMP

B(I) SERIES

LARGE BOOSTER PUMPS

대형 펌프의 특징 & 장점 Advantage for vacuum large pump (B55A, BI55A, B70A, BI70A)

• 업계최대용량

고진공 펌프로써 업계최대용량의 직결구동형식이다.

• Industry's capacity

Form of direct drive pumps. The industry's highest capacity.

• 소형, 경량화된 구조

고용량 대비 고속회전수(3600rpm)의 소형화된 형식으로써 설치 및 관리면적이 매우 적게 소요된다. 또한, 알루미늄 합금재질로 구성되어 취급이 간편하다.

• Small, light-weight structure

High-capacity pump rotational speed(3600rpm) is a miniaturized format. It takes very little installation and management. Further, the aluminum alloy consists of the handling is easy.

• 냉각수 열교환량 극대화

본체에 직접 워터자켓을 형성하여 냉각수를 순환하므로 냉각효과가 뛰어나다.

• Maximize the amount of cooling water heat exchanger

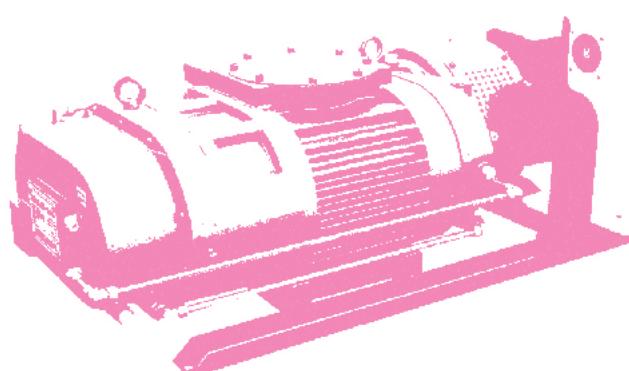

water line, by creating a cooling effect inside the pump is superior.

• 고진공 안정성

높은 정밀도의 제작기술로써 고속회전체의 미세간극을 유지하여 안정된 성능에 도달할 수 있다.

• High vacuum stability

Pumps for precision manufacturing rotor with microscopic can keep the gap. So a stable vacuum could reach performance.

VACUUM PUMP

B(I) SERIES

LARGE BOOSTER PUMPS

대형 펌프의 특징 & 장점 Advantage for vacuum large pump

(B55A, BI55A, B70A, BI70A)

• 윤활유량 및 오염도 가시창

각 윤활실에 가시창(Sight glass)를 설치하여 윤활유량 및 오염도 적정성을 판단할 수 있다.

• You can check the amount of oil and pollution

Sight glass is installed on each of the lubricating oil contamination levels and can be confirmed.

• 신속한 초기 배기구조

보조펌프 저진공 배기 시 진공실(Process Area) 및 윤활실(Lubrication Area)이 관로 장애 없이 신속하게 배기되어 규정 진공상태로 도달할 수 있다.

• Rapid initial exhaust structure

Auxiliary vacuum pump exhaust state that Lubrication Area Process Area and the problem Therefore, a vacuum state is reached faster.

• 인버터 제어 – 선택사양

모터 기동을 인버터로 제어함으로써 회전수 가변을 통하여 최상의 가동성능을 유지하고 펌프부하를 줄이도록 한다.

• Inverter Control – Optional

Start the motor by controlling the inverter operation best performance, the load of the pump can be reduced.

• 윤활실 별도배기 시스템 – 선택사양

진공실(Process Area)과 윤활실(Lubrication Area)을 별도 배기하여 오염을 차단할 수 있다.

• Separate exhaust system Lubrication Area – Optional

Lubrication Area Process Area and the contamination of the exhaust can be blocked separately.

• 일체형 소재의 메카니컬 씰 적용

높은 강도의 일체형 소재를 적용한 메카니컬 씰은 내마모성과 내구성이 매우 높다.

• Solid disk type mechanical seal application

Mechanical seal where applies solid disk of the high grade hardness, wear is less and durability are very good.

VACUUM PUMP

B(M) SERIES

BOOSTER PUMPS

■ 구조 & 작동원리 Structure and operation principle ■

B(M) 시리즈는 루츠형 메카니컬 부스터펌프이다.

메카니컬 부스터펌프의 작동원리는 케이싱 내에 있는 2개의 땅콩모양의 로터가 축에 고정되어 있는 타이밍 기어에 의해 서로 반대방향으로 같은 주기로 회전하도록 되어있다.

흡입라인에 유입된 기체는 케이싱과 로터 사이의 공간에 밀폐되어 있다가 로터의 회전에 의해 배기라인으로 배출되며 이것을 1차 펌프(베이스 펌프)가 대기중으로 방출시킨다.

로터와 로터, 로터와 케이싱은 매우 작은간격을 유지하며 회전하기 때문에 실린더 내부와 로터에는 윤활유가 필요 없다. 따라서 깨끗한 진공배기가 가능하다.

또한, 로터는 고속회전(Max. 3500rpm)을 하면서도 케이싱과 마찰이 없으므로 반영구적이기도 하다.

특히 재질은 고강도, 고순도의 알루미늄 합금을 사용하였으며 표면의 내부식성과 경도를 더욱 향상 시키기 위해 표면처리를 하도록 하였다.

메카니컬 씰은 특수 재질의 카본과 솔리드 씰을 사용하여 마모율이 적고 보다 높은 내화학성이 있다.

B(M) Series pump is Roots type Mechanical Booster Pump. Structure operation principle of mechanical booster pump is rotated in compliance with opposite direction each other adopted two peanut shaped rotor at two rotor in casing by timing gear at shaft.

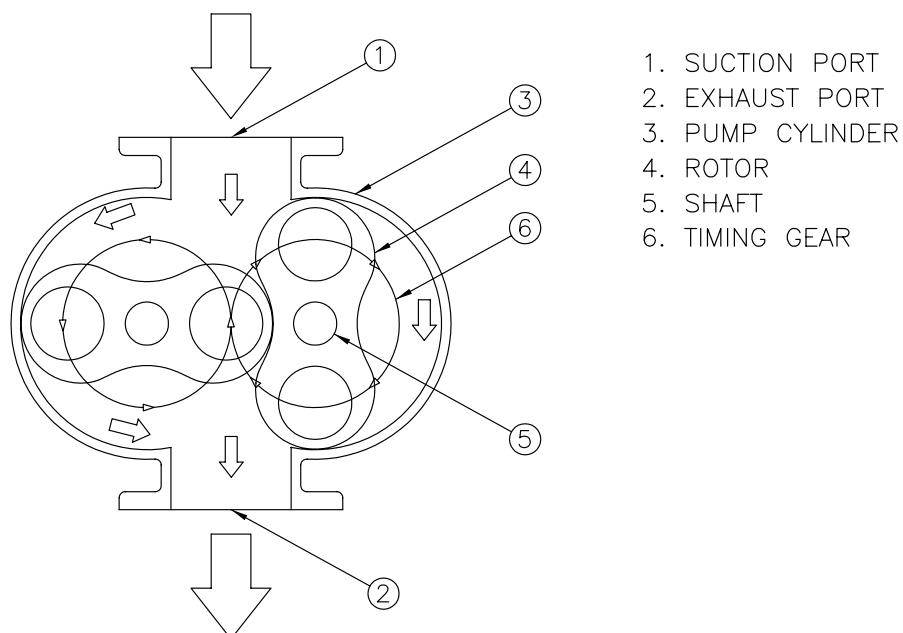

After the gas which flows into a suction line is shut tightly in space between casing and rotor, the gas flow is formed in space by rotation by rotors and discharge to the exhausted line, this gas is discharged to atmosphere by sub vacuum pump(base vacuum pump).

This booster pump is lubricating oil free because between rotor and rotor, between rotor and casing that rotate with a little gap. It can make the evacuation mach clearly.

Even though this rotor can make high-speed rotation(max,3500rpm) that have not much friction loss at casing to rotor to rotor, so that is very semipermanent and economic.

Specially the rotor is made of the aluminum alloy that is high strength and high purity, so that has a surface preparation process in order to have a resistance of the causticity of the surface and improving the hardness of the rotor much more.

Mechanical seal uses the carbon and the solid which are a special material so that have better resistant to abrasion and chemical reaction.

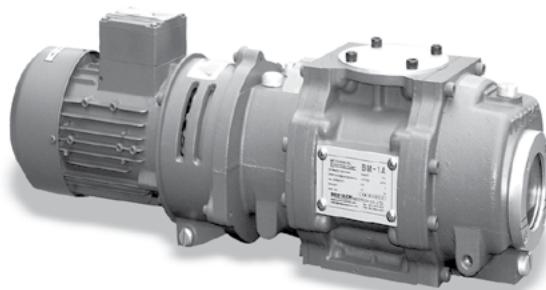

VACUUM PUMP

SD, SES SERIES

DRY PUMPS

펌프의 특징 & 장점 Advantage for vacuum pump

• 가스의 흐름을 고려한 펌프 구조

맞물려 회전하는 로터에 의한 배기ガ스 흐름은 항상 일정한 순방향으로 진행하도록 하여 배기효율을 극대화하였다.

• Good design and structure which considers the gas flowing

Flowing gas rotate with rotor which those set each other that the gas flowed easily that makes it has maximize exhaustion efficiently.

• 높은 내부식성과 내화학성

가스 부위와 접하는 내부 부품은 필요에 따라 다양한 표면처리가 가능하여 내부식성과 내화학성에 매우 강하다.

• The better resistant to abrasion and chemical reaction

Inside parts can take the special treatment at surface as the demand that those are very strong resistant to abrasion and chemical reaction.

• 구성 부품의 단순화

축과 로터를 일체화하여 슬라이딩으로 인한 로터의 위상 변화가 없도록 하여 펌프의 내구성을 향상시켰다.

• Simplification of compositions

Durability is much improve to make the single body that shaft and rotor. it has considered that axis not change when the rotation module slide.

• 고품질 소재 사용

기표가 극히 적은 양질의 FCD 주물을 사용하여 고품질의 제품을 실현하였다.

• Using high quality materials

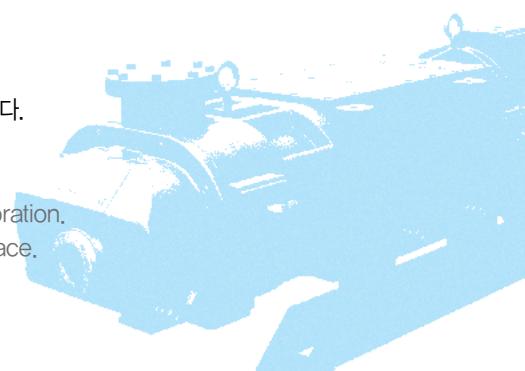

Using the accomplished quality material 'FCD cast-iron ware' which has seldom the bubble that makes vacuum pump high quality.

• 소음과 진동이 작다.

정숙한 작동으로 소음과 진동이 작아 쾌적한 공간에서 사용이 가능하다.

• More less noise and more less vibration

Dry pump has operating with less noise and more less vibration. This pump can be able to operate comfortably in clean place.

VACUUM PUMP

SD, SES SERIES

DRY PUMPS

펌프의 특징 & 장점 Advantage for vacuum pump

• 가변피치 방식의 다단로터 적용

가변피치 방식의 다단로터를 적용하여 정숙한 운전과 높은 진공도를 얻을 수 있다.
또한 동일 배기량의 등변피치 방식에 비해 크기가 작아 설치 공간이 작다.

• Variable pitch type multi stage rotor

When screw dry pump operating at high vacuum ultimate pressure, it is much better vacuum pressure rapidly and very good advantage of space share that compared with invariable pitch type stage model at the same grade.

• PCB 제어가 가능

SES Series는 PCB를 이용한 제어를 하도록 하여 자기 진단이 가능하고, 다양한 안전장치를 간단하게 구성하도록 하였으며 케이스카바를 이용하여 외관이 미려하다.

• Possibility to PCB controls

SES Series uses PCB in order to control that can take the self-diagnosis so that is possible to make a simple and easy to compose with the various safety device. Using the case cover that has good appearance.

• 신개념의 밸런스 웨이트의 장착

로터의 고속회전 시 균일한 밸런스를 위해 별도의 밸런스 웨이트를 장착함으로써 보다 안정적인 가동 성능을 보장하도록 하였다.

• New ideal balance weight adoption

Dry pump has adopted balance weight to balancing equally while the rotors have high speed rotation. This balance weight make the guarantee of the better operating performance.

• 높은 온도의 Process에서도 운전이 가능

공정에서 유입되는 고온의 가스를 그대로 펌프 외부로 방출하도록 함으로써 펌프 몸체로 전달되는 열이 적어 고온의 공정에서 운전이 가능하다.

• It can be use for high temperature process.

The high temperature gas inflow from the process that can be exhaust to way out in order to prevent thermal absorption. so this pump can operate at high temperature process.

• ISO 규격의 Motor flange 적용

ISO 규격의 모터를 적용 누구나 쉽게 모터 교환이 가능하도록 하였다.

• ISO standards application

To use ISO standards Motor application Anyone can shift and change the motor easily at anyplace and anytime.

VACUUM PUMP

SD, SES SERIES

DRY PUMPS

구조 & 작동원리 Structure and operation principle

가변피치 방식의 다단 스크루우 드라이 펌프(Multi Stage Screw Dry Pump)의 작동원리는 Casing내에 있는 2개의 Screw 모양의 Rotor 가 Shaft에 고정되어 있는 Timing Gear에 의해 서로 반대방향으로 같은 주기로 회전하도록 되어있다.

흡입라인에 유입된 기체는 Casing과 Screw Rotor 사이의 공간에 밀폐되면서 Screw Rotor의 회전으로 인해 가스의 흐름이 축 방향으로 형성되어 배기라인으로 배출되고 대기 중으로 방출 시킨다.

Screw Rotor와 Screw Rotor, Screw Rotor와 Casing은 매우 작은 간격을 유지하며 회전하기 때문에 Casing 내부와 Screw Rotor에는 윤활유가 필요 없다. 이는 깨끗한 진공배기를 가능하게 해준다.

또한 Screw Rotor는 고속회전(Max. 3500rpm)을 하면서도 Casing과 Screw Rotor, Screw Rotor와 Screw Rotor에는 마찰이 없으므로 마모가 없어 반영구적이다.

특히 Screw Rotor의 재질은 균질의 FCD주물을 사용하였으며 표면의 내부식성과 강도를 더욱 향상시키기 위해 표면 처리를 하도록 하였다.

또한 PCB 제어가 가능하며 각종 안전부품의 장착이 가능하도록 하였다. Shaft Seal은 립씰을 적용하여 소음이 작고 씰 내구성이 있으며 진공 도달능력이 뛰어나다. Booster Pump와 직렬로 조합하여 사용 시에는 보다 안정적인 진공을 얻을 수 있다.

Structure and operation principle of variable pitch methods
Multi stage screw dry pump is rotated in compliance with opposite direction each other two screw rotor in casing by timing gear at shaft.

After the gas which flows into a suction line is shut tightly in space between casing and screw rotor, the gas flow is formed in space by screw rotor's axis and discharge to the Exhausted line atmosphere by Screw rotor rotation.

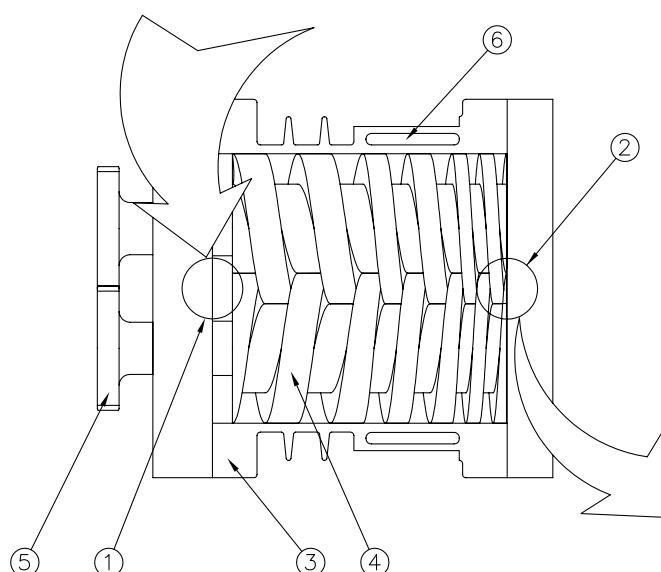

This dry pump is lubricating oil free because between screw rotor and screw rotor, between screw rotor and casing that rotate with a little gap.

To make a clean evacuation is superior.

Even though this screw rotor can make high-speed rotation(max. 3500rpm) that screw rotor have not much friction loss at casing to screw rotor, screw rotor to screw rotor, so that is very semipermanent and economic.

Specially, the screw rotor is made of homogeneously FCD cast-iron ware that has a surface treatment process in order to have a resistance of the causticity of the surface and improving the intensity of the screw rotor much more.

Also dry pump can controls by PCB and safety device or parts can be adopted. Adopted lip seal at shaft that has superior endurance, noise is small and vacuum pressure conserve. Dry pump operate with booster pump Series will have much short exhausted time and much better ability of having a high stabled vacuum ultimate pressure.

Displacement Speed(유효배기속도) m ³ /hr	50Hz	254
	60Hz	
Ultimate Pressure(도달압력) Pa(Torr)		6.7×10 ⁻² (5×10 ⁻⁴)
Motor(사용동력) Kw(Pole)	Dry Pump (SD120)	4(2)
	Booster Pump (B3B)	0.75(2)
Oil Volume Required(윤활유량) l	Dry Pump(Fomblin 25/6)	0.5
	Booster Pump(Fomblin 14/6)	0.4
Cooling Water(냉각수)(10~30°C)	Flow Rate(l /min)	5
	Pressure(Mpa)	0.2<P
Nitrogen	Flow Rate(SLM)	5~50
	Pressure(Mpa)	0.1~0.5
Suction Port(흡입구) KSB1540	ISO80	
Exhaust Port(배기구)	NW40	
Dimension(외형치수) (L×W×H)	1,145.9×500×921	
Weight(제품무게) (Kg)	310	
Option(선택사항)	Silencer, Check Valve	

- 13Pa(1.0×10^{-1} Torr)에서 유효배기속도 측정 (Displacement exhaust speed measurement in 13Pa(1.0×10^{-1} Torr))
- 도달압력은 냉음극전리 진공계를 사용하여 측정한 값이며 피라니진공계 사용 시 4.0×10^{-1} Pa(3×10^{-3} Torr)을 유지함 (Because Arrival pressure makes use of cold negative pole ionization vacuum gauge is value that measure and keeps 4.0×10^{-1} Pa(3×10^{-3} Torr)at pirani vacuum gauge use)
- 상기값은 표준보조펌프 적용 시 측정된 값이며, 보조펌프의 성능에 따라 측정값은 가변됨(Ultimate pressure is value measured at standard assistance pump application, and measurement value is variable by assistance pump performance)
